TEAM MEMBERS: Ella Goldman, En-Jui (Rachel) Hsu, Michael Morales

In this iteration, your team will turn the project plan into a **system design**: define every task, decide how the program is organized, and start the implementation. By the end of the iteration, your program must compile and run with a menu that includes **every task of the project**, even if some tasks are not finished yet.

Excel Logs:

EECE2140 Final Project Log.xlsx

1. Assign a Project Leader

- Choose one team member as **Project Leader** for this iteration. It should be someone who has not led before.
  - Ella Goldman
- The Project Leader coordinates daily progress, makes sure tasks are shared fairly, presents the status report at the check-in meeting, and keeps the task table up to date.
  - EECE2140 Final Project Log.xlsx

2. Define All Tasks

List every feature of your project as a separate task. For each task, record:

- a task ID and a short name
  - Excel Setup: create an excel spreadsheet to log tasks done during the project
  - Menu0: conceptualize and create a menu for a start button menu
  - Menu1: conceptualize and create a menu to ask the user for their age
  - Menu2: conceptualize and create a menu to ask if the user would like to see their live reading
  - Menu3: conceptualize and create a menu to ask the user for if they are at rest, working out, or walking
    - EECE2140 Final Project Log.xlsx
- the menu option that runs it
  - Menu0
    - Would you like to run the program? (Y/N)
      - Y: runs program

            - N: ends program
        - Menu1
            - Enter age:
                - Age < 3:
                - 3 < age < 12:
                - Age > 12:
- the team member responsible
    - EECE2140 Final Project Log.xlsx
- the files and functions it will be written in
    - Vscode
    - Shared repository in github
- the expected deliverable and its status (not started, stub, in progress, done)
    - EECE2140 Final Project Log.xlsx

3. Design the System

- **Classes:** activity class, person class, reading class
- **Menu:** design a text menu where each option runs exactly one task.
- **File structure:** activity.h/.cpp, person.h/.cpp, reading.h/.cpp
